PROFESSIONAL SUMMARY

Motivated Embedded C Developer with hands-on experience in firmware development, microcontroller programming, and hardware-software integration. Proficient in Embedded C with practical exposure to peripheral interfacing and communication protocols such as UART, SPI, I2C and CAN. Experienced in debugging, troubleshooting, and developing efficient, reliable embedded solutions. Quick learner with a strong interest in embedded systems, low-level programming, and real-time applications, eager to contribute to innovative product development.

TECHNICAL SKILLS

- | | | | |
|--------------|--------|--------------|---------------|
| • C | • IoT | • UART | • LPC2148 |
| • C++ | • Java | • CAN | • STM32F401RE |
| • Embedded C | • SPI | • Modbus | • ESP32 |
| • Python | • I2C | • PIC18f4580 | • RTOS |

WORK EXPERIENCE

Embedded C Developer

NovaTekno Pvt Ltd.

Pune

July 2025– Present

Completed a paid internship as an **Embedded C Developer, Embedded System Engineer**, gaining hands-on experience in embedded **firmware development** for **microcontroller-based systems** using Embedded C. Worked on peripheral interfacing and communication protocols such as **UART, SPI, and I2C** to enable hardware-device interaction. Assisted in **debugging, troubleshooting**, and basic device driver modifications while supporting **hardware-software** integration and system testing. Participated in validation and performance optimization activities, developing practical skills in embedded systems development, problem-solving, and real-world engineering workflows.

PROFESSIONAL EXPERIENCE

- Developed embedded firmware using **Embedded C** for microcontroller-based applications.
- Worked with communication interfaces including **CAN, UART, SPI, and I2C**.
- Implemented sensor interfacing and handled **real-time data acquisition**.
- Performed debugging, testing, and firmware-level issue resolution.
- Contributed to system integration and performance optimization.

PROJECT

Project 1 : Embedded CAN Data Logger for Vehicle Diagnostics

July 2025 – Present

Project Description :

Designed and developed a CAN-based embedded data logger for automotive diagnostics and testing, capable of acquiring data from 8 temperature sensors and 2 pulse sensors. The system was built to ensure reliable real-time data acquisition, efficient processing, and stable communication across hardware modules. Implemented live data monitoring and data handling mechanisms to support validation and diagnostics in embedded environments.

Key Responsibilities :

- Developed embedded firmware using **Embedded C** for sensor data acquisition and processing.
- Implemented communication interfaces including **CAN, UART, SPI, and USB**.
- Integrated and validated **temperature and pulse-based sensors**.
- Designed CAN data transmission for reliable real-time communication.
- Performed debugging, testing, and firmware optimization.
- Supported live data monitoring and diagnostic workflows.

Technologies Used:

Embedded C, STM32F401RE, ESP32, CAN / CAN FD, SPI, UART, USB, Ethernet, Sensor Interfacing, Pulse Signal Processing, Fixed-Point Data Representation, Communication Protocol Integration, Debugging & System Validation.

Project 2 : Ornithopter for Smart Agriculture Applications

July 2023 – May 2024

Project Description :

Designed and developed an ornithopter-based system intended for smart agriculture use cases such as field monitoring and environmental observation. The project focused on integrating embedded control, sensor interfacing, and wireless communication to enable stable flight control and real-time data acquisition. The system was engineered to explore low-power aerial monitoring solutions for agricultural environments.

Key Responsibilities :

- Developed embedded control logic for flight mechanism and actuator handling.
- Integrated sensors for environmental data acquisition and system feedback.
- Implemented communication interfaces using **UART / SPI / Wireless modules**.
- Worked on microcontroller-based firmware development and system debugging.
- Assisted in hardware integration, testing, and performance validation.

Technologies Used:

Embedded C / C++, Microcontroller Programming, UART, SPI, Sensor Interfacing, Actuator Control, Wireless Communication, System Debugging, Hardware Integration

EDUCATION

• BE In Electronics Engineering — Pune University,	2024	73.00 %
• HSC (12th Standard) — Maharashtra State Board,	2020	62.15%
• SSC (10th Standard) — Maharashtra State Board,	2018	86.00%

DECLARATION

I hereby declare that the information furnished above is true and correct to the best of my knowledge and belief.
